## EXPERIENCE

### **Volusion, Austin, TX — Web Developer**

October 2015 - PRESENT

SASS, Javascript, Yeoman, Bootstrap, HTML

As a member of the creative services team, I worked with a team of inhouse designers and developers providing custom themes for clients using Volusion stores. My role was to build responsive page templates based on provided design files that worked within the storefront.

### **The LIVESTRONG Foundation, Austin, TX — Web Developer**

May 2013 - October 2015

Stylus, Django, Backbone, Chaplin, SASS, HTML, Coffeescript, LeafletJS

I started working at the LIVESTRONG Foundation as an intern. As a web developer, I worked on a variety of tasks that involved updating static page content to building dynamic data driven web pages.

### **eBook Architects, Austin, TX — eBook Developer**

August 2010 - January 2014

HTML, CSS, Javascript

As an eBook Developer, I utilized current web technologies to build files that worked on a variety of reading devices. At eBook Architects, I became versed in ebook development learning more of the technical aspects of web page creation including XHTML, CSS, product testing, graphic manipulation, and web design techniques.

### **Apple Inc., Austin, TX — Global Web Content Editor**

August 2012 - December 2012

XML, Content Editing

In this position, I worked as a contract employee with the Apple Online Store Communications team. I helped this team convert a backlog of internal customer service documents into XML content that could be served on an internal intranet.

## SKILLS

HTML, CSS, MVC, Backbone, Object Oriented Javascript, jQuery, HTML5, XHTML, SASS, Susy, Bourbon, Breakpoint, Git, Coffeescript, Angular, Leaflet, Grunt, Django, Browserify, Node, Express, MongoDB

## AWARDS

**Completed** a JavaScript certification course.

Named **employee of the month** at LibreDigital for the month of July 2010.

## **LibreDigital, Austin, TX — *Electronic Publication Content Coordinator***

March 2007 - August 2013

Organization, eBook Production, HTML, CSS, XML

Before leaving LibreDigital, I went from being an entry level proofreader to technical lead in their ebook production process. As their lead ebook developer, I managed a variety of external and internal resources in the best practices and current standards necessary to create quality cross device compliant ebook files. It is in their role that I began my career in web technology.

## **EDUCATION**

### **Northwestern State University, Natchitoches, LA — *Bachelor's of Arts Professional***

August 2001 - June 2006

### **Austin Community College, Location — *Associates of Applied Science Web Programming and Associates of Applied Science Web and Interactive Design***

January 2011 - May 2016

## **PROJECTS**

### **Community Fundraising — <http://www.livestrong.org/events/community/>**

In an effort to help promote community fundraising efforts, the LIVESTRONG decided to create an app using information about active LIVESTRONG events and community sponsored activities. The page uses data about current event participants involved in active fundraising with the foundation. The page presents this data as a collection of cards that are searchable.

### **LIVESTRONG at the YMCA — <http://www.livestrongymca.org/>**

To promote the LIVESTRONG at the YMCA program, I built a small Node, Express, MongoDB, and Backbone app to show a map of all the locations offering this program. This app is a full stack project I created. I set up:

- MongoDB and the APIs that communicate with it
- Admin tools to bulk upload Excel spreadsheets of YMCA data and individual pages to edit single YMCA locations.
- Sendgrid API based tools to create email communication functionality
- Geocoding features using Google's Geocoding API for geo spatial search indexes
- LeafletJS to build the map on the site landing page
